

r•BC™

SELF SERVE

GENERAL DESCRIPTION

The r-BC is used to control and manage the wash equipment in a Self Serve carwash. The r-BC also manages automatic carwashes as well as peripheral equipment like vacuum cleaners and fragrance machines. An r-BC system is built around four main components, a central processing unit and three network nodes. One network node with LCD display sits in your coinbox and the other in your equipment room. The third type of I/O node is used in retro-fit applications where the existing control system of the self-serve bay is maintained.

r-BC Web Interface

The r-BC hosts a Web Interface used to allow remote computers to connect to the r-BC and monitor or configure the carwash. All configurable aspects of the car wash are accessible through the r-BC's Web Interface.

RETRO FIT PROGRAM

- Add Card Reader
- Create Loyalty Programs
- Track Existing Programs
- Web Enable Wash

NEW EQUIPMENT INSTALLS

- Modular System
- All TCP/IP Connections
- Advanced Management System
- Total Intergration

KEYPAD w/ CARD READER
